

MULTI-PURPOSE PRE / POST / DRY COMBO™

New Standard in Productivity

In 1995 we introduced the first true multi-purpose applicator ("PrePost™") that was designed to spray both pre and post emerge crops. They quickly set the standard for productivity, which no other machine has matched to date. Pre emerge work is done with floater tires and flood nozzles and then the row crop tires go on and the boom is lowered and a switch changes the boom to Tee Jet nozzles for applying chemicals on 20" spacing. In the fall the floats go back on and a 12-Ton G4 spreader is utilized for dry application.

The Stahly Pre/Post/Dry™ applicator has truly raised the bar for productivity and return on investment.
