

# Viper PRO Options

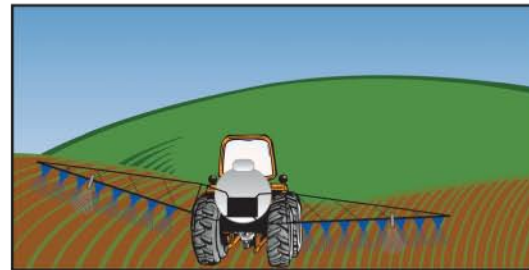

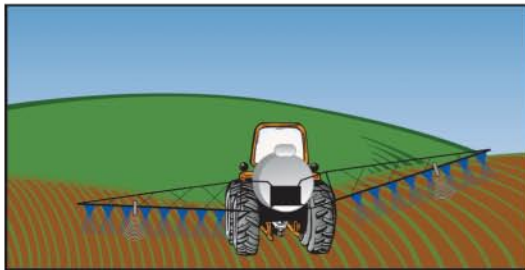

AccuBoom can help eliminate skips and overlaps in your field. By monitoring where the sprayer or spreader has applied, AccuBoom automatically turns boom sections on when traveling into areas that have not been covered. It will also turn boom sections off when encountering previously applied areas or "No Spray Zones" such as waterways.

## AUTOBOOM *GLIDE series*

Autoboom allows you to spray faster and more accurately by detecting changes in ground height and adjusting your boom height automatically. Not only can you decrease driver fatigue and wear and tear on your machine, but you increase the accuracy and coverage of the application. It's a simple one-touch operation, allowing you to just sit back and drive.

### SmarTrax

- Aggressive Line Acquisition
- Accurate On-Line Performance
- Sub-meter and decimeter modes to match your application and GPS receiver capabilities
- Rugged, weatherproof enclosure
- Exclusive Raven technology
- Operate at speeds up to 22 mph

### QuickTrax

- Steering wheel drive for SmarTrax
- Easy installation
- No hydraulics
- Can be moved between machines
- Gear drive, no friction wheel to slip
- Accuracy from sub-meter to decimeter
- Quick line acquisition, no need to line up close to next path before engaging

### Phoenix 200

- Sub-meter, single frequency WAAS receiver
- Upgradeable to e-Dif differential correction
- Utilizes a helix-style antenna to better track satellites low on the horizon
- Smart antenna - receiver and antenna in a single enclosure
- Simple installation
- Easily moved from one machine to another

### Phoenix 300

- Scalable, sub-meter to decimeter, dual frequency receiver
- Upgradeable to OmniStar XP and HP correction
- Utilizes a helix-style antenna to better track satellites low on the horizon
- Simple installation
- Easily moved from one machine to another
